

Division of Information Technology Services Technical Bulletin

Number: 0119
Issued Date: June 28, 1991
Effective Date: June 28, 1991
Section/Groups:
Submitted By:
Approved By: Sandra neal

Amendment to Technical Bulletins 116 and 117

Banner Page Printed on Output Listings

The Banner Page attached to Technical Bulletin 116 will not be implemented with the installation of software upgrades on CPU2, CPU3, and CPU4. The laser printer and some of the RJE printers are dependent upon the present format of the Banner Page for billing and special forms.

Please disregard information pertaining to a revised Banner Page in Technical Bulletin 116 as follows:

- C Page 3 of Technical Bulletin 116 described a revision to the Banner Page and Attachment B of Technical Bulletin 116 was an example of a revised Banner Page.

The Banner Page attached to this Technical Bulletin is similar to the Banner Page which will be implemented with the software upgrades on CPU2, CPU3, and CPU4.

Sysout printing enhancements not available

Sysout printing enhancements of the OUTPUT JCL statement will not be available with the installation of the software upgrades on CPU2, CPU3, and CPU4. The printing functionality of the OUTPUT JCL statement is inhibited because of its dependency upon the Banner Page format attached to Technical Bulletin 116, which cannot be implemented.

Please disregard information on systout printing enhancements as follows:

- C On Page 3 of Technical Bulletin 116, refer to "Print separator pages"
- C On Page 3 of Technical Bulletin 117, see the information on "new keyword parameters" under the heading "OUTPUT statements add functionality to output processing".
- C On Page 4 of Technical Bulletin 117 following the heading "Additional info available to print on the output banner page".

JCLLIB statement syntac in Technical Bulletin 117 is incorrect.

The JCLLIB statement should not contain "DD" prior to the ORDER parameter as documented in Technical Bulletin 117. See Page 2 of Technical Bulletin 116 for the correct syntax.

PDSPDS software to scan and replace PDS data coming soon.

Information on software which could be used to change PDS JCL members for job class, PROCLIB/JCLLIB, accounting, etc. will be available on the I.T.S. Bulletin Board soon. A technical bulletin will be issued to notify I.T.S. customers of PDSPDS availability via Bulletin Board.

If you need assistance with access to the I.T.S. Bulletin Board in Office/Vision Electronic Mail, contact I.T.S. Production Support at 538-3488.
